

1. Continuous Integration - <https://buildkite.com/>  
Real Time Error Monitoring - <https://www.datadoghq.com/>
2. **<https://buildkite.com/>**: Buildkite is a platform for running fast, secure, and scalable continuous integration pipelines on your own infrastructure, and there's a free trial to test out. Has big customers, such as venmo  
**<https://www.datadoghq.com/>**: it sees across systems, apps, and services, with turn-key integrations, catalog aggregates metric and events across full devOps stacks and has a lot of big customers, such as Shells, Deloitte, and WholeFoods
3. I did a free trial for both, I felt like the instructions were pretty clear and it walked me through the steps, and both wanted me to connect through GitHub, which was pretty helpful. I felt like I could trust datadog more because of their customers.
4. **BuildKite** - The earliest GitHub was on February 24, 2014, I couldn't really find information of when it started, the GitHub site is <https://github.com/orgs/buildkite/>. I feel like its pretty popular because to has some big name customers, like venmo. The CEO is Lachlan Donald, he was technologist for 20 years.  
**DataDog** - The earliest GitHub was on Jan 3, 2011. It went public on September 19, 2019. The CEO is Olivier Pomel, and he use to make data systems for elementary school teachers.
